# State-Space Search: Overview

## Chapter overview: state-space search

- 5.–7. Foundations
- 8.–12. Basic Algorithms
- 13.–19. Heuristic Algorithms
  - 13. Heuristics
  - 14. Analysis of Heuristics
  - 15. Best-first Graph Search
  - 16. Greedy Best-first Search,  $A^*$ , Weighted  $A^*$
  - 17. IDA $^*$
  - 18. Properties of  $A^*$ , Part I
  - 19. Properties of  $A^*$ , Part II

# Reminder: Heuristics

## Definition (heuristic)

Let  $\mathcal{S}$  be a state space with states  $S$ .

A **heuristic function** or **heuristic** for  $\mathcal{S}$  is a function

$$h : S \rightarrow \mathbb{R}_0^+ \cup \{\infty\}, \quad \text{infinity} = \text{no path to goal}$$

mapping each state to a non-negative number (or  $\infty$ ).

# Properties of Heuristics

# Perfect Heuristic

## Definition (perfect heuristic)

Let  $\mathcal{S}$  be a state space with states  $S$ .

The **perfect heuristic** for  $\mathcal{S}$ , written  $h^*$ , maps each state  $s \in S$

- to the cost of an **optimal solution** for  $s$ , or
- to  $\infty$  if no solution for  $s$  exists.

.

# Properties of Heuristics

## Definition (safe, goal-aware, admissible, consistent)

Let  $\mathcal{S}$  be a state space with states  $S$ .

A heuristic  $h$  for  $\mathcal{S}$  is called

- **safe** if  $h^*(s) = \infty$  for all  $s \in S$  with  $h(s) = \infty$  all predicted inf are actually inf
- **goal-aware** if  $h(s) = 0$  for all goal states  $s$
- **admissible** if  $h(s) \leq h^*(s)$  for all states  $s \in S$
- **consistent** if  $h(s) \leq \text{cost}(a) + h(s')$  for all transitions  $s \xrightarrow{a} s'$

# Properties of Heuristics

## Definition (safe, goal-aware, admissible, consistent)

Let  $\mathcal{S}$  be a state space with states  $S$ .

A heuristic  $h$  for  $\mathcal{S}$  is called

- **safe** if  $h^*(s) = \infty$  for all  $s \in S$  with  $h(s) = \infty$
- **goal-aware** if  $h(s) = 0$  for all goal states  $s$
- **admissible** if  $h(s) \leq h^*(s)$  for all states  $s \in S$
- **consistent** if  $h(s) \leq \text{cost}(a) + h(s')$  for all transitions  $s \xrightarrow{a} s'$

# Examples

# Properties of Heuristics: Examples

Which of our three example heuristics have which properties?

## Route Planning in Romania

straight-line distance:

- safe
- goal-aware
- admissible
- consistent

Why?

# Properties of Heuristics: Examples

Which of our three example heuristics have which properties?

## Blocks World

misplaced blocks:

- safe?
- goal-aware?
- admissible?
- consistent?

# Properties of Heuristics: Examples

Which of our three example heuristics have which properties?

## Missionaries and Cannibals

people on wrong river bank:

- safe?
- goal-aware?
- admissible?
- consistent?

# Connections

# Properties of Heuristics: Connections (1)

Theorem (admissible  $\implies$  safe + goal-aware)

*Let  $h$  be an admissible heuristic.*

*Then  $h$  is safe and goal-aware.*

Why?

admissible  $\rightarrow$  we underestimate  $\rightarrow$  goal has to be 0 (lowest number)  $\rightarrow$  we are goal-aware

## Properties of Heuristics: Connections (2)

Theorem (goal-aware + consistent  $\implies$  admissible)

*Let  $h$  be a goal-aware and consistent heuristic.*

*Then  $h$  is admissible.*

Why?

consider  $h^*$  is infinite  $\rightarrow$  admissible

# Showing All Four Properties

How can one show most easily that a heuristic has all four properties?

you need to show consistency (no other property implies it)

and

goal-aware (easier) or admissable

# Summary

# Summary

- perfect heuristic  $h^*$ : true cost to the goal
- important properties: safe, goal-aware, admissible, consistent
- connections between these properties
  - admissible  $\implies$  safe and goal-aware
  - goal-aware and consistent  $\implies$  admissible
